HELLO WORLD

You get containers, and you get $10M and you get $20M and you get $100M!! March Madness may be over, but VC madness is upon us, and the industry is making big bets on a very transformative future. Application patterns are changing, user experiences are changing (mobile) and DevOps operational models are trying to keep up. Where else are you going to find the latest news about how all of this impacts you or your business? No matter where you are today, we have what you need to LEARN, find open CODE, and DEPLOY everywhere.

We hope you'll enjoy this newsletter. We'll do our best to distill, aggregate and share news related to the {code} community and industry happenings.We'll provide the content, but we need your feedback. You can always reach us at emccode-newsletter@emc.com. If you missed a previous issue, the EMC {code} newsletter archive is online.

Introducing ViperPy and #DevHigh5 Winner, Chad Lung!

It's been a busy month for the {code} community, with six new #DevHigh5 projects posted on GitHub. [ViperPy](#) is one of them. #DevHigh5 winner Chad Lung describes the project [in his recent blog post](#):

"ViperPy is a Python library for interacting with the [EMC ViPR API](#). ViperPy began originally as an easy way to hook up numerous projects that needed to interact with the ViPR product in order to perform certain metering and billing extraction and handle authentication tokens behind the scenes."

Chad realized that this could be helpful for his team if he added support for additional APIs and other features. ViperPy offers a means for Python users to write their application, as an alternative to the Java SDK. Check out ViperPy and follow Chad on [Github](#) and [Twitter](#)!
