EMC {code}
Community Onramp for Developer Enablement

"CODE OPEN, DEPLOY EVERYWHERE" - EMC believes in open source. CODE is here to share and collaborate with developers worldwide.

HELLO WORLD

Docker, Docker, and more Docker! Over the past few weeks, the newsletter has been full of Docker and this week is no different. We spent time this week at this year's first Docker Meetup in Boston and have continued working with Docker and specifically the Docker Toolbox this week. Keep reading for more information.

And as always if we are hanging out in your local area, don't be shy, please come say hi! We'd love to connect.

We hope you'll enjoy this newsletter. We continue to distill, aggregate and share news related to the {code} Community and industry happenings.We'll provide the content, but we need your feedback. You can always reach us at emccode@emc.com.

First Docker Meetup in Boston of 2016

This week the Docker Boston Meetup was hosted at VMTurbo's amazing offices in downtown Boston. To start off the evening, NVBOTS' Forrest Pieper and Areth Foster-Webster, showed off how to use Resin.io to push out Docker containers to their large fleet of 3D printers located at various customer sites around the globe. They also printed a large number of Docker whale keychains and handed them out to the audience. A very nice touch!

Volume Plugins with Docker Toolbox and Boot2Docker

In our latest blog, Clint Kitson takes us through the process of running Docker Toolbox and Volume Plugins. Docker Toolbox is described as a set of tools that allows you to run a Docker environment on your computer. Kitson does a great job breaking down the blog into three sections: installing, deploying and using the Docker Toolbox.

For more information on Boot2Docker and how to utilize the Docker Toolbox visit the blog.
